

Quick Start — Pharmaceuticals Calculator

Version 1.1.2

1. WHAT THIS CALCULATOR DOES

This calculator helps you plan **pharmaceutical** needs for a field hospital deployment. You can start from a built-in **ward** or **intensive care (ICU)** medication list, set deployment details, and see estimated quantities. It is for **clinical, pharmacy, nursing, and logistics staff** doing planning estimates. Final medication decisions must follow your facility's policies and qualified clinicians.

2. BEFORE YOU START

- Approximate **length of deployment** (days).
- **Expected number of beds**.
- Whether to apply a **buffer percentage** on top of calculated quantities, and what level is appropriate.
- Whether your patient mix is closer to a **ward** or **ICU** medication profile for the starting list.
- Optional: medications you know must be added or adjusted for your mission.

3. HOW TO USE IT — STEP BY STEP

1. Open the pharmaceuticals calculator from the suite.
2. Choose **Ward Meds** or **ICU Meds** to load the matching baseline medication list (this replaces the current worksheet list).
3. Enter **deployment parameters**: length of deployment, number of beds, and buffer percentage if used.
4. Review the **pharmaceuticals requirements table** for calculated quantities by item. Use search and sort to work through the list.
5. Use **Add Item** to include medications not on the built-in list, or use the Delete button on any row to remove items you do not need.
6. When ready, **save a named scenario** or **export to a file**, and use **Print** if you need a hard copy.

4. UNDERSTANDING THE RESULTS

Each row shows a **medication (or related item)** and an estimated **quantity** based on your inputs. Summary numbers and item counts are based on **what is visible** in the table when you search or filter. Use the results to inform **procurement, packing, and resupply conversations**. Treat the output as a **planning aid**, not a final prescription or formulary decision.

5. SAVING YOUR WORK

Save a **named scenario** with **Save scenario** when you want a version you can reload later in this browser. Use **Export to file** to keep a backup or send your plan to someone else. If something disappears from the screen, try **Restore Autosave** on the toolbar to recover the last automatically saved worksheet state.
